States of Nepal

Tanahun District

We arrived at Lacourye Boat, near Thaprek, on April 25, 2023, after an eight-hour drive from Kathmandu. The village is situated in the mountains at an altitude of 1,100 meters; we took a steep path to reach it. The local leader, Mr. Narayan Kathepipal, welcomed us into his home, and the entire village was there to greet us.

For a month, we shared their daily lives, accommodation, and family meals, gaining insight into their culture and the challenges they face—such as water shortages, limited transportation, power outages, and a lack of Wi-Fi. Together with the community, who allocated a portion of their land for our use, we set up trials for planting European seeds.

The village's current projects include paving the rocky mountain roads with asphalt to make travel easier and safer. To address the lack of drinking water, they have begun constructing a 20,000-liter reservoir at the valley bottom, connected to a second, higher-elevation tank to supply the village. They are carrying out all this work without mechanical tools, transporting all materials on their backs. We are awaiting the opening of the community center so we can share our knowledge across various fields.

Building Water Tank

Paving of the road by the villagers

With obtaining our "Work Permit", we leave the Lacourye Boat community to begin our collaboration with Shree Amar Jyoti Secondary School 4 kilometers away in Tallipokhari. The water supply works in the village have been completed and the local authorities have come to inaugurate them.
